Rapid BI Reporting & Analytics

FAST DEPLOYMENT

With no local installation, Infinis makes data warehousing and deployment of new projects possible in a matter of days.

SIMPLE DASHBOARD & REPORT CREATION

Business users can combine data intuitively, enabling them to more time analyzing and less time trouble-shooting code.

BUDGET-FRIENDLY BI

Infinis projects cost 50 % less than the best placed competitors, and 30 % less than the cost of traditional BI solutions.

Infinis is the first accessible enterprise reporting and analytics application that offers companies, big and small, the “on-off” speed that business users expect, along with the reliability and scalability expected from IT departments.

Companies that use Infinis have IT teams ranging from 2 to 2000 people, and between 10 and hundreds of business users. With Infinis, they have one thing in common: their IT teams and business users have discovered that connecting data, creating reports, analyzing information and publishing dashboards can be as easy as turning on a switch.

Two main limitations have so far prevented the widespread adoption of BI tools in the business world: *the data warehousing process* and *user interface complexity*.

- **AUTOMATIC DATA WAREHOUSE BUILDER**
Import all your enterprise data instantly, from any source: finances, CRM, ERP, HR, Excel, PDF, web.
- **DASHBOARD CREATION & STORAGE SYSTEM**
Visualize your data in a virtual workspace with interactive charts, tables, gauges and KPIs.
- **REPORT CREATION & STORAGE SYSTEM**
Create and edit dynamic BI reports quickly and easily, using drag & drop functionality - no coding needed!
- **PUBLISHING AND SELF-SERVE PORTAL**
Publish your reports securely to PDF, PowerPoint, Word or SharePoint, and share your dashboards with authorized users.

Building and maintaining a data warehouse is a precondition of BI adoption that is typically very time-consuming and costly to maintain. In addition, current BI tools are complex, rigid and slow - even the most agile BI solutions available require programming and IT intervention.

Infinis is the first BI solution to overcome both of these limitations at the same time. It does this by bringing together the best data warehousing and usability features into a single package, with an attractive pricing structure that sticks out refreshingly in the BI market.

Infinis is as easy to use as Excel and PowerPoint, yet still as powerful as the top enterprise BI reporting and analytics systems currently available in the industry.
